Mac Integration Basics 10.12 training

MAC Integration Basics 10.12 Training sets the foundations for individuals to easily integrate a MAC into a Windows network environment. With the diversification of work environment, organizations are today wanting to integrate Mac computers into Windows or other standards-based network environments. But to make this integration an easier process, Apple provides the right guidance through this training course for users and the IT professionals who support MAC systems.

This is a basic training session that provides step-by-step instructions for a successful MAC integration.

Completion of this training course will enable candidates in:

- Integrating a Mac into a Windows network environment
- Running Windows programs on a Mac
- Configuring a Mac to work with Active Directory
- Providing security at the user, local-networking, and remote-networking levels
- Migrating data from a Windows PC to a Mac
- Taking advantage of network services, file sharing, printing, instant messaging, email, calendars, and contacts
- Backing up data

Course Details
