VMware vSphere : Install, Configure, Manage [v6.5]

5 Days

VMware vSphere: Install, Configure, Manage [v6.5] training program is the upgraded version of ICM 6.0 that characterize installing, configuring and managing the vSphere 6.5 infrastructure. Having been built on the Software-Defined Data Center (SDDC), the knowledge to this program will help you attain application virtualization, data center simplification and operational efficiency in an enterprise of any size.

The vSphere 6.5 infrastructure is inclusive of VMware ESXi™ 6.5 and VMware vCenter Server® 6.5 that will be helpful in managing virtual machine, creating and optimizing templates, clones, and snapshots. This course is advisable to Network/IT Administrators or consultants who marshal vSphere platforms on behalf of their clients.

*Note – The New Foundation exam is required which is now 2V1-602.
