

4 Days

## Java EE 6: Develop Business Components with JMS & EJBs

The Java EE 6: Develop Business Components with JMS and EJBs training imparts knowledge of the key functionalities required to build Java Messaging Services (JMS) & Enterprise JavaBeans (EJBs). This course deploys Enterprise JavaBeans (EJBs) version 3.1 technology to build and implement business-tier functions in JMS applications. Not only this, but participants learn the best tools and practices of EJB technology that simplify java applications and smoother communications.

### Completion of this training course will enable candidates in

- Implementing business-tier functionality using EJB technology.
- Exploring the EJB technology coding experience of session beans and message driven beans in a JMS application.
- Assembling and deploying EJB technology business-tier components on an application server.
- Examining EJB design, best practices, transaction management, messaging fundamentals and security.
- Integrating an EJB technology-based application using the Java Messaging Service API.
- Integrating transactions and security into an enterprise application.
- Describing best practices and other advanced issues in business component development with EJB technology.
- Creating and implementing timer-based services.

### Course Benefits:

- Attaining certification of this course will equip individuals in coding session beans, message-driven beans and using the JMS API. Participants will also evaluate the benefits of deploying EJB technology with respect to transaction management, messaging, and security in an enterprise application.

## Course Details

---

### Course Outline

#### 1. Introducing the Course

- Review course objectives
- Discuss course format and LVC
- Discuss 4-day course schedule
- Get acquainted with other students
- Review the Java SE and Java EE Curriculum

## **2. Introducing Java EE**

- Java™ Platform, Enterprise Edition
- Java EE container services
- Java EE application architecture
- EJB component types
- Comparison of Java EE application development and traditional enterprise application development

## **3. Implementing Session Beans**

- Types of session beans
- Stateful Session beans
- Stateless Session beans
- Singleton Session beans
- Choosing a Session bean type
- Tasks of creating a Session bean
- Session Bean clients
- Packaging and deployment

## **4. Accessing Session Beans**

- Use Naming Services
- JNDI API
- Develop Session Bean Clients
- Create a Session Facade

## **5. Advanced Session Bean Concepts**

- EJB Containers and Components
- Session Bean Identity
- Session Bean Lifecycle
- Lifecycle Event Handlers
- Advanced Session Bean Configuration
- Asynchronous Communication

## **6. Developing Singleton Session Bean**

- Singleton Session Bean
- Singleton Concurrency
- Singleton Session Bean Lifecycle

## **7. Using Context and Dependency Injections**

- Introduction to CDI Named Beans
- Scopes, Qualifiers, and Alternatives

## **8. Using Java Persistence API**

- What is JPA?
- Entity operations
- Queries
- Components of JPA architecture

## **9. Developing Java EE Applications Using**

- Messaging Concepts, Destinations and Clients
- Creating a Queue
- Message Producer
- Queue Message Browser
- Create a Synchronous Queue Consumer

## **10. Developing Message-Driven Beans**

- Introduction to Message-Driven Beans
- Life Cycle of a Message-Driven Bean
- Create JMS Message-Driven Beans
- Lifecycle Event Handlers
- Configure the Message-Driven Bean

## **11. Using Timer Services**

- Create a timer callback notification
- Process a timer callback notification
- Describe timer services
- Manage timer objects

## **12. Implementing Interceptor Classes and Methods**

- Introduction to Interceptors
- Interceptor class and methods
- Types of Interceptors
- Lifecycle callback interceptors

## **13. Implementing Transactions**

- Bean managed transactions
- Transaction demarcation task

- Transaction policy
- Container-managed transactions
- Transaction in messaging

#### **14. Implementing Security**

- Authentication
- Authorization
- Java EE Platform Security Model
- Programmatic Security
- Declarative Security

#### **15. Using EJB Technology Best Practices**

- Java EE Application Design
- Exception Handling

#### **16. Appendix A - Introducing Transactions**

- Examine Transactions
- Types of Transactions
- Transaction-Related Concurrency Issues
- Handle Distributed Transactions
- Java Transaction API (JTA)

#### **17. Introducing UML**

- Basics of UML
- Types of UML Diagrams
- Elements of UML diagrams
- Illustrations of all UML diagrams

## **Who Should Attend**

This course is ideal for those working with the profiles of:

- Java Developers
- Java EE Developers

# Pre Requisite

## Required:

- Developing Applications with Java EE 6 on WebLogic Server 12c
- Java SE 7 Programming

## Suggested Prerequisites:

- Java SE 7: Develop Rich Client Applications
- Developing Applications for the Java EE 6 Platform
