Software Testing Fundamentals

Software Testing Fundamentals (STF) is a training and certification program to gain (or refresh) basic knowledge in the field of Software Testing.

Course Details

Course Outline

- Testing is the process of evaluating a system or its component(s) with the intent to find whether it satisfies the specified requirements or not.
- Testing is executing a system in order to identify any gaps, errors, or missing requirements in contrary to the actual requirements.
- This tutorial will give you a basic understanding on software testing, its types, methods, levels, and other related terminologies.

Who Should Attend

This tutorial is designed for software testing professionals who would like to understand the Testing Framework in detail along with its types, methods, and levels. This tutorial provides enough ingredients to start with the software testing process from where you can take yourself to higher levels of expertise.

Pre Requisite

Before proceeding with this tutorial, you should have a basic understanding of the software development life cycle (SDLC). In addition, you should have a basic understanding of software programming using any programming language.

Exams

Microsoft Certified Professional (MCP) [98-379]
