

3 Days

Citrix XenApp 7.5 Skills Update

This course provides experienced Citrix XenApp professionals with the skills required to implement Citrix XenApp 7.5. Professionals will learn how to configure a XenApp 7.5 environment that includes the following Citrix components:

- Delivery Controller,
- Director,
- Studio,
- MCS,
- NetScaler,
- Provisioning Services,
- Receiver.

Upon course completion, candidates will be able to implement and configure a XenApp 7.5 solution. This course includes access to a live lab environment.

Course Details

Course Outline

Course Preview:

- Recognize the basic requirements for a XenApp 7.5 implementation
- Explain the architecture and where the XenApp components fit in an implementation
- Identify how HDX policies, profile management, printing, and delegated administration are configured
- Explain how Provisioning Services, StoreFront, and Director work
- Identify how applications are made available
- Explain the new features in the release
- Set up SQL mirroring for high availability
- Install the Delivery Controller and set up a site
- Join a second Delivery Controller to a site for high availability
- Install and configure StoreFront for secure communications
- Configure NetScaler to load balance the connections to StoreFront
- Configure NetScaler to provide remote access
- Install the Virtual Delivery Agent on a virtual machine
- Create a Server OS machine catalog to provide hosted shared desktops and hosted applications to users
- Configure and optimize Provisioning Services
- Create Windows templates for use with Provisioning Services
- Create new vDisks and import existing vDisks into Provisioning Services
- Create a machine catalog using the XenDesktop Setup Wizard
- Create Delivery Groups and publish applications
- Deliver App-V applications
- Configure Receiver using email-based discovery
- Verify internal and external access to resources
- Configure load-evaluator policies for server-based VDAs
- Monitor an environment with Director
- Configure the logging of configuration changes
- Configure delegated administration
- Use PowerShell cmdlets

Who Should Attend

This course is designed for IT professionals, architects, systems engineers, server administrators, and Citrix Partners with prior Citrix XenApp experience.
