3 Days

2433: Microsoft Visual Basic Scripting Edition and Microsoft Windows Script Host Essentials

This 3-day course gives enables you to manage the Windows network by using the Windows Script Host (WSH) and the Microsoft Visual Basic, Scripting Edition (VBScript) language.

Moreover, the participants work on real-world scripts and have an overview of Windows Management Instrumentation [WMI] and Active Directory Service Interfaces [ADSI].

Course Objective:

On completion of course, you will be able to:

- Work with scripts to write, debug, and troubleshoot.
- Use Visual Basic, and scripting editions
- Locate and fix the logical problems by using the debugger
- Use of logon scripts to perform common tasks
- Automate management tasks by using WMI

Course Details

_____
