AZ-101: Microsoft Azure Integration and Security

This Microsoft Azure Training by Mercury Solutions makes you equipped with the technical skills to use Azure Migrate to evaluate the migration scenarios and migrate servers to Azure. You will learn the implementation and management of the Application Services.

This Microsoft Azure AZ-101 course will take you through the aspects of virtual networking which would involve the implementation of application load balancing and Azure load balancer, monitoring and troubleshooting networking, and integration of on-premises network with the Azure virtual network.

This Microsoft Azure Training makes you understand how to secure identities by implementing the multi-factor authentication, management of role-based access control, and you will learn how to implement the Azure AD Privileged Identity management.

You need to pursue the below mentioned courses:

AZ-101T01: Migrate Servers to Azure
AZ-101T02: Implement and Manage Application Services
AZ-101T03: Implement Advanced Virtual Networking
AZ-101T04: Secure Identities

Update! Now you to pass only one exam [AZ-103](#) to earn [Microsoft Certified: Azure Administrator Associate certification](#). This exam combines AZ-100 and AZ 101 (Effective May 1, 2019).

Course Details

Course Outline

Module 1: Evaluate and perform server migration to Azure

Module 2: Implement and manage application services

Module 3: Implement advanced virtual networking

Module 4: Secure Identities

Who Should Attend

Azure Administrators

Pre Requisite

Candidates should have proficiency in:

- PowerShell
- Command Line Interface
- Azure Portal
- ARM templates
- Operating systems
- Virtualization
- Cloud Infrastructure
- Storage Structures
- Networking
