Oracle BigMachines Blue Belt

BigMachines Blue Belt shows learners how to use the BigMachines application to meet advanced use cases. This course builds on the knowledge that participants already have from BigMachines Yellow Belt. Exercises and demos throughout the course give learners hands on experience in implementing solutions to complex business requirements. Attendees will learn how to use the BigMachines Markup Language (BML) to define advanced functions throughout the site, extending the functionality of the point-and-click interface. In addition to demonstrating how to use BML in conjunction with Configuration and Commerce, the course shows learners additional complex functionality within Configuration, Commerce and the Document Engine. BigMachines Blue Belt also includes basic training in CSS, XML, XSL and how administrators can use these languages to their advantage within the system. Define advanced BML functions throughout a BigMachines site Utilize advanced Commerce functionality and tools Solve complex Document Engine
